safety switch 4	Power
safety switch 5	Power
safety switch 6	Power
safety switch 7	Cook top
safety switch 8	Oven
safety switch 9	
safety switch 10	

6 MONTHLY

Notes

Check your state regulations for the recommended testing interval  
 Using the "test Button" is not a guarantee of correct operation only an indication that its working  
 Press the test button for 2 seconds if it does not trip at all call an electrician urgently.  
 Safety switches are designed to trip in under 30 Ms or under 0.03 of a second.  
 If you are renting a property ask for the safety switch test results.  
 When purchasing a property have the the electrical installation tested including full results of the safety switches :  
 EG the Insulation test results in Meg Ohms  
 RCD 1 trip time in Ms at 30ma
